#### **DETAILED ACTION**

Page 2

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 18, 21, 26-29 and 32-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Linkola et al (US 6,708,033) in view of Valentine et al (US 5,924,027) and further in view of Osmo (US 2003/0157942A1).

Regarding claims 18, 29 and 35, Linkola teaches a method in a communication system for providing a location service with geographical location information associated with a user equipment capable of communicating with the communication

Art Unit: 2617

system (see Abstract), the method comprising the steps of: storing connection information identifying a connection of the user equipment in the communication system (see column 9, lines 63-66 and column 11, lines 36-52) and wherein the connection information includes a service area identity or a cell global identity (see Abstract and column 1, lines 15-37, column 9, lines 63-67, column 8, lines 45-53).

Linkola does not specifically disclose determining whether the user equipment is currently unreachable in the network, wherein if the user equipment is currently being unreachable in the network, the location of the user equipment is determined in dependence on the stored connection information for the user equipment, the location of the user equipment is determined in dependence on the last stored connection information for the user equipment.

Linkola does not specifically disclose determining whether the user equipment is currently unreachable in the network, wherein if the user equipment currently unreachable in the network, the location of the user equipment is determined in dependence on the last stored connection information for the user equipment.

Valentine teaches determining whether the user equipment is currently unreachable in the network (see column 3, lines 46-61, see "not answer" and "unreachable"), wherein if the user equipment currently unreachable in the network (see column 3, lines 46-61, see "not answer" and "unreachable"), the location of the user equipment is determined in dependence on the last stored connection information for the user equipment (see column 3, lines 46-61, see "last known location" and "stored").

Application/Control Number: 10/518,365

Art Unit: 2617

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Valentine into the system of Linkola in order to improve cellular communications system and method (see Valentine, Abstract).

The combination of Linkola and Valentine does not specifically disclose the step of translating the connection information into geographical coordinates.

Osmo teaches the step of translating the connection information into geographical coordinates (see page 2, [0039], first seven lines).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Osmo into the system of Linkola and Valentine in order provide location dependent information in a communication system (see Osmo, Abstract).

Regarding claim 21, Linkola further teaches the connection information is stored in a control element of the communication system (see column 11, lines 46-52).

Regarding claim 26, Linkola further teaches the step of translating the connection information into geographical coordinates is carried out by a location service (see Abstract and column 1, lines 15-37, column 9, lines 63-67, column 8, lines 45-53).

Regarding claims 27 and 33, Linkola further teaches the communication system comprises a cellular telecommunications network (see fig.1).

Regarding claims 28 and 34, Linkola further teaches the user equipment comprises a mobile station (fig.1, see "MS").

Art Unit: 2617

Regarding claim 32, Linkola further teaches wherein network element is one or all of a radio network controller, a mobile switching center of the communication system, a serving GPRS support node of the communication system, or a serving mobile location center of the communication system (fig.1, see "BSC" or "MSC").

4. Claims 22, 23, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Linkola et al (US 6,708,033) in view of Valentine et al (US 5,924,027) and further in view of Osmo (US 2003/0157942A1) and Official notice.

Regarding claims 22, 23, 24 and 25, the combination of Linkola, Valentine and Osmo teaches the connection information is stored in a control element of the communication system (see Linkola, column 11, lines 46-52), instead of the connection information is stored in a radio network controller of the communication system *or* in a mobile switching center of the communication system *or* in a serving GPRS support node of the communication system *or* in a serving mobile location center of the communication system as claimed. However, storing the connection information in a radio network controller of the communication system *or* in a mobile switching center of the communication system *or* in a serving GPRS support node of the communication system *or* in a serving mobile location center of the communication system are known in the art.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the above teaching of Linkola, Valentine and Osmol for provide a method as claimed, for storing the connection information.

Art Unit: 2617

5. Claims 19, 20, 30 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Linkola et al (US 6,708,033) in view of Valentine et al (US 5,924,027) and further in view of Osmo (US 2003/0157942A1) and Amirijoo et al (US 6,603,976).

Page 6

Regarding claims 19, 30 and 31, the combination of Linkola, Valentine and Osmo teaches claim 18. The combination of Linkola, Valentine and Osmo does not specifically disclose the location service is provided by a gateway mobile location center.

Amirijoo teaches the location service is provided by a gateway mobile location center (see column 5, lines 32-46).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Amirijoo into the system of Linkola, Valentine and Osmo in order to provide a method and system of delivering time of arrival positioning data to one externally operated and maintained requesting agent (see Amirijoo, column 1, lines 7-11).

Regarding claim 20, the combination of Linkola, Valentine and Osmo teaches claim 18. The combination of Linkola, Valentine and Osmo does not specifically disclose the gateway mobile location center is adapted to communicate with a gateway mobile location center of a further communication system.

Amirijoo teaches the gateway mobile location center is adapted to communicate with a gateway mobile location center of a further communication system (see fig.2b, connection between 14a and 14b).

Application/Control Number: 10/518,365 Page 7

Art Unit: 2617

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Amirijoo into the system of Linkola, Valentine and Osmo in order to provide a method and system of delivering time of arrival positioning data to one externally operated and maintained requesting agent (see Amirijoo, column 1, lines 7-11).

## Response to Arguments

6. Applicant's arguments with respect to claims 18-35 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nghi H. Ly whose telephone number is (571) 272-7911. The examiner can normally be reached on 8:30 am-5:30 pm Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Appiah can be reached on (571) 272-7904. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
